

1. Automated Teller Machine (ATM):

The software ATM version1.0 is to be developed for Automated Teller Machines (ATM). An automated teller machine (ATM) is computerized telecommunications device that provides a financial institution's customers a secure method of performing financial transactions, in a public space without the need for a human bank teller. Through ATM, customers interact with a user-friendly interface that enables them to access their bank accounts and perform various transactions

User Stories for ATM:

1. As a Customer

I want to Login to my account using card and PIN code

So that I can perform the transactions.

Acceptance Criteria –

- System must validate the card and pin code
- In case Customer enters wrong Pin code three times then the system locks the card.

2. As a Customer

I want to check the balance of my bank account

So that I can perform transactions.

Acceptance Criteria –

- Customer needs to be logged in before checking balance.
- Balances are displayed.

3. As a Customer

I want to deposit cash in my bank account through ATM

So that I may save my time and perform transactions later.

Acceptance Criteria –

- Customer needs to be logged in before depositing cash.
- System should verify the amount of cash deposited by checking with the user.
- If the user doesn't agree then the system ejects back the cash.
- If Ok the account balance is updated and displayed.

SL NO	TEST CASE	EXPECTED RESULT	TEST RESULT
01	ATM Login Functionality	Verify if a user will be able to login with a valid username and valid password	PASS
02	ATM Login Functionality	Verify if a user cannot login with a valid username and an invalid password.	PASS

2. Online Book shop:

New customers need to register first to get an account ID. The customer needs to provide the following information to the store: customer name, phone number, email address, home address info (street, city, state and zip code), and password.

The bookstore keeps a large amount of books. Each book is identified by its ISBN. For each book, the bookstore also needs to record its authors' names, title, edition, publication year, category, publisher, quantity-in-stock, buying price, and selling price

One customer can place any number of orders. For each order, the bookstore needs to record who places this order, when, the order status, total price, shipping address, payment method, bill address, and ordered books.. Currently for payment method, it only accepts credit card, hence the bookstore needs to record credit card information.

Functions for customers:

- New user account registration
- User login
- User can update his/her address, password etc.
- Book search (by author name, title, category, year or combinations)
- Create one empty order or shopping cart
- Add/delete books from shopping cart
- Change shopping carts as orders (please note that once a shopping cart is changed to order, all of this shopping cart's info should be removed from the database).
- Place the order
- Order trace

User Stories for Online bookshop:

1. As a Customer

I want to Login to my account using email address and password.

So that It route the user to My Account home page and display signed-in status on header.

Acceptance Criteria –

- System must validate the email address and password

2. As a Customer

I want to Login to my account using incorrect combination of email address and password

So that it reset credentials fields and display an error message “Incorrect Credentials.

Acceptance Criteria –

- System must validate the email address and password and displays error message.

3. As a Customer

I want to register in to Onlinebookshopcart

So that it route the user to the “registration” page

Acceptance Criteria –

- System must route into registration page.
- System should register new user with valid email-id, password and his/her personal details.

01	OBS(Online Book shop) Login Functionality	Verify if a user will be able to login with a valid email address and valid password	PASS
02	OBS(Online Book shop) Login Functionality	Verify if a user cannot login with incorrect combination of email address and password.	PASS
03	OBS(Online Book shop) Registration Functionality	System should register new user with valid email-id, password with his/her personal details.	PASS

3. Course Management Software(CMS):

A **course management system (CMS)** is a collection of software tools providing an online environment for course interactions. A CMS typically includes a variety of online tools and environments, such as:

- An area for faculty posting of class materials such as course syllabus and handouts
- An area for student posting of papers and other assignments
- A grade book where faculty can record grades and each student can view his or her grades
- An integrated email tool allowing participants to send announcement email messages to the entire class or to a subset of the entire class
- A chat tool allowing synchronous communication among class participants

Administrator Module:

Admin can produce accounts for college students and faculties and make course programmed list and add faculties and students to it course list.

Admin can produce course details exploitation course creation kind that consists in fact name, course id, and choose student. Using Student creator kind student details are entered to information. User name, adapt username, password, given name and name, ID. After accounts are produced supported every students and instructors are divided and accessorial to list exploitation create missing students kind.

Faculty Module:

It can check student's papers, their assignments and assign grades for work. This module accommodates preparation menu, choose student for grades.

Students Module:

Student can register with application or the proposed system and login with user name and password. He will check and submit assignment and his/her grade. Every student can have id.

User Stories for Course Management Software(CMS):

1. **As a** Administrator

I want to **add** students and faculty information into CMS

So that students/faculty uses the CMS.

Acceptance Criteria –

- Course Management software successfully add student/faculty information.

2. **As a** Faculty

I want to **add/upload** study materials to CMS

So that I can upload study materials to CMS for students.

Acceptance Criteria –

- Faculty able to upload/modify the study materials/assignments.

3. **As a** student

I want to **Login** to my CMS account using register number and password.

So that I can view study materials/attend quiz conducted by faculty.

Acceptance Criteria –

- System must validate the register number and password.

SL NO	TEST CASE	EXPECTED RESULT	TEST RESULT
01	CMS students Login Functionality	Verify if students will be able to login with a valid register number and valid password.	PASS
02	CMS Faculty Signup Functionality	Verify faculty able to signup CMS software with valid fact-id , password with his/her personal details.	PASS

4. Department Leave Software(DLS):

This project is aimed at developing a web based Leave Management Tool, which is of importance to either an organization or a college. The Dept. Leave is an Intranet based application that can be accessed throughout the Organization or a specified group/Dept. This system can be used to automate the workflow of leave applications and their approvals. The periodic crediting of leave is also automated. There are features like notifications, cancellation of leave, automatic approval of leave, report generators etc in this Tool.

Module:

1) STAFF MODULE: It consist of two types of faculties

a) Teaching

b) Non-teaching

2) HOD MODULE: It consists of Head of the Department/Manager Body which takes critical decision related to HR.

3) ADMINISTRATION MODULE: It calculates leaves & maintains records.

Objective:

- To automate the existing leave management in educational institutes
- To decrease the paperwork and enable the process with efficient, reliable record maintenance by using centralized database, thereby reducing chances of data loss
- To provide for an automated leave management system that intelligently adapts to HR policy of the organization and allows employees and their line managers to manage leaves and replacements for better scheduling of work load & processes.

User Stories for Department Leave Software (DLS):

1. As a Teacher

I want check available leave from data store

So that I can apply for leave.

Acceptance Criteria –

- Department Leave software successfully shows/displays teachers available leaves (CL/CCL) etc.

2. As a HOD

I want check employee available leave from data store

So that I can Accept/Reject leave application.

Acceptance Criteria –

- HOD has successfully check employees (teacher) leave details to accept/reject employee leave Application.

3. As a Admin

I want to **Login** to my DLS using my id and password.

So that I can add/delete/update employee details.

Acceptance Criteria –

- System must validate the admin id and password.
- Admin able to add/delete/update employee leaves details.
